UniGo 3005

UniGo 3005 with a new graphical display

The UniGo 3005 has a display with large graphical characters with a new and very intuitive layout.

Laptimer and Data Logger in one

Driver and mechanics can analyse results directly in the Laptimer display. UniGo 3005 records data 10 times per second, so you can also analyse data on a computer with the free analysis software.

The free analysis software provides a complete overview which enables you to compare results between drivers, training sessions and heats.

Features

All-In-One System	A powerful 32 bit processor is controlling the user interface and logging. Connects directly to sensors from the box.
Lightweight Plastic Casing	The elegant display casing is just 18 millimetres thick and made of lightweight plastic. Available in several colours.
Advanced Analysis Software	Analyse and compare results from different laps and drivers with the free Analysis Software. This allows you to determine the best set-up for both kart and engine.
Easy to Operate	Menu based user interface with explaining help text. Select between different languages. Setup can be moved from one UniGo to another.
Advanced Graphic Display	High resolution display with 16 grey tones ensures easy to read text and icons.
Fast Downloading of Data	Equipped with an USB high-speed interface enables download of data to a PC with the optional USB cable.
Advanced Data Logging	All available channels are logged with 10 Hz. Storage for 60 min. of data.
Additional Features	2 temperature inputs*, IR or Magnet trigger input, Speed sensor input* and 200 laps capability.

* Cable splitter needed
